Docker Basic setup

-

Full logs

Using: Oracle VirtualBox

Virtual Machine 1(SERVER): ubuntu-24.04.1-desktop-amd64

Test program: Python/flask app(basic)

1) sudo apt install docker.io - had little problems with instalation , but i just
forgot to do 'sudo apt-get update' , after that everything installed correctly.

2) sudo systemctl enable docker

3) sudo systemctl start docker

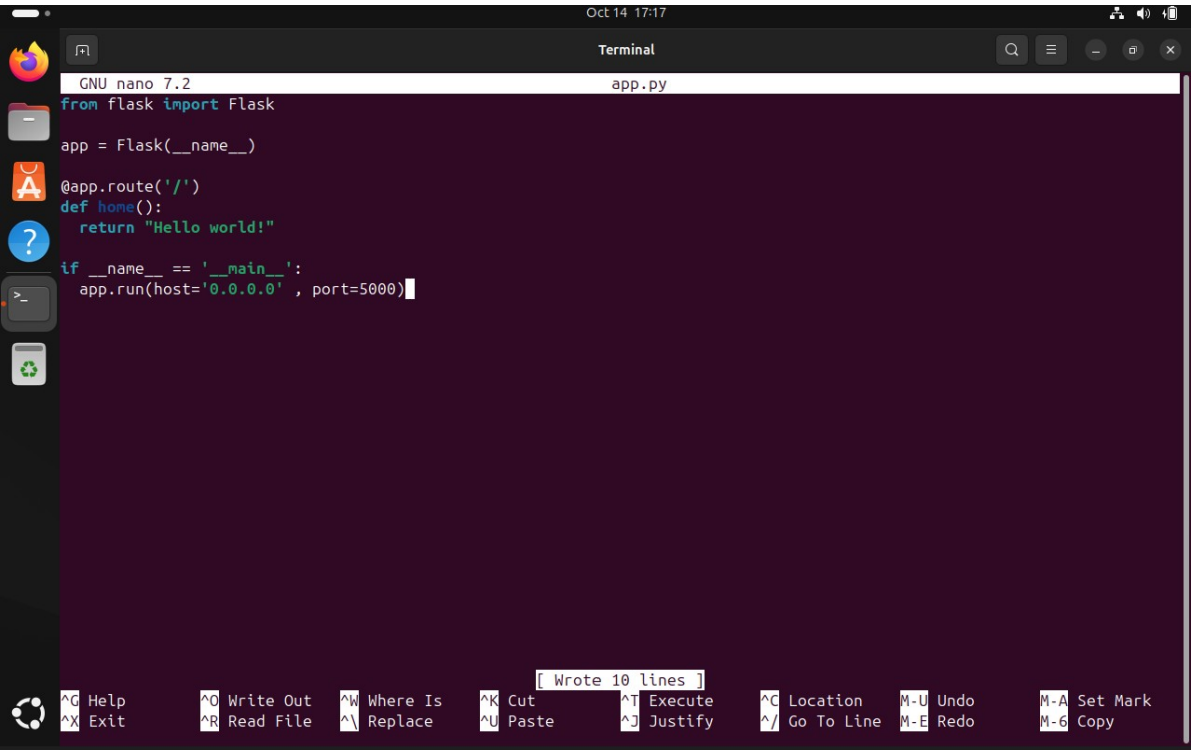
4) sudo systemctl status docker - checked the status , docker service works.

5) mkdir docker-test - created folder for docker app in
'/home/administrator/Desktop/docker-test'

6) cd /home/administrator/Desktop/docker-test

7) touch app.py

8) nano app.py - created basic Python/flask code

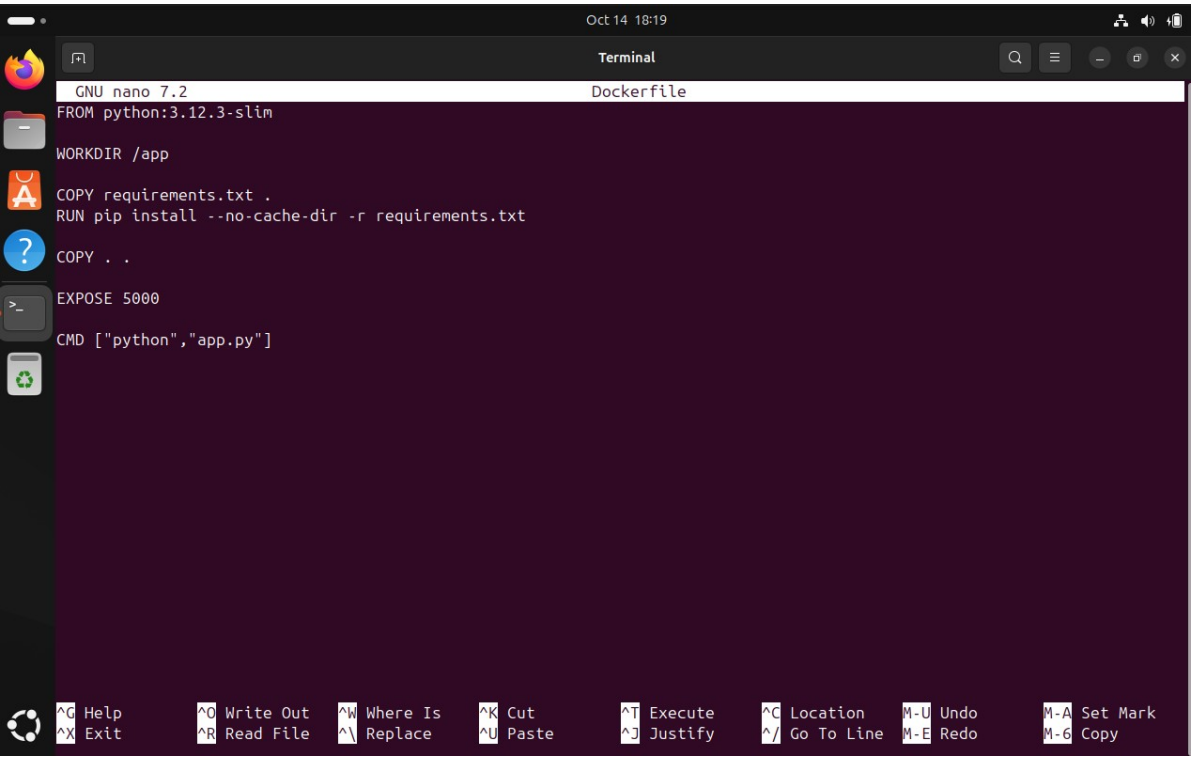


9) touch requirements.txt - making requirements list, dependencies for python that
needed to be installed in the docker in order for app to work

10) nano requirements.txt - adding just one line 'flask' , we don't need more for
that project to work

11) touch Dockerfile

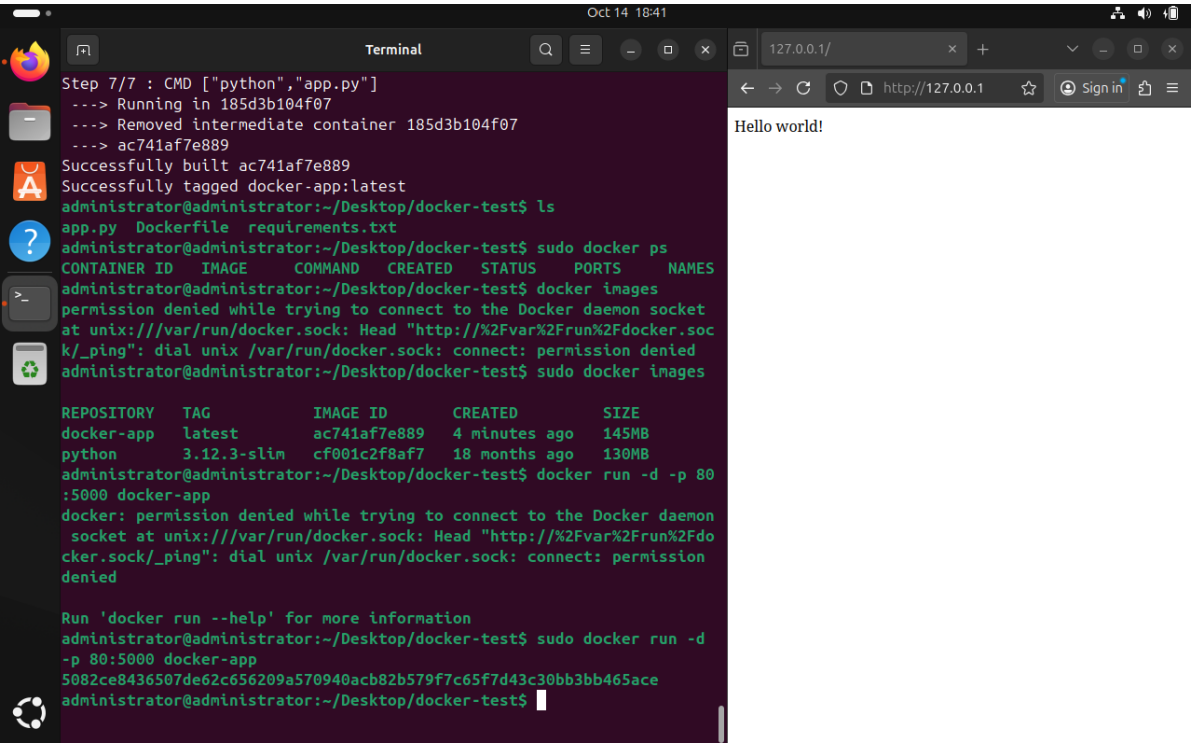
12) nano Dockerfile



13) <appDir$> docker build -t docker-app . - tried to build image but got error,
something with permissions for user

14) sudo docker build -t docker-app . - seems to work now , image is building

15) sudo docker images - docker-app is in the list of docker images

16) sudo docker run -d -p 80:5000 docker-app - starting the image


17) <ANY BROWSER> 127.0.0.1:80/ - Everything work as expected , i can see my web page
